NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Vaccine to protect plys against swine dysentery - comprises Vaccine to protect plys against swine dysentery - comprises Treponema hyodysenteriae endo-flagellum sheath protein, applied orally or intranasally [Page 21-22; 34pp; English].

This sequence encodes the endoflagellum sheath protein of T. hyodysenteriae. The endoflagellum consists of at least four proteins, this protien forms the sheath of the flagellum and three proteins, of molecular weights 37, 34 and 32 kD, make up its core. Antibodies raised against the sheath protein have been shown to be bacteriacidal for T. hyodysenteriae. The 43 kD sheath protein can be used in the production of a vaccine against infections such as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
Pri binding proteins
Proceeding the Call State Composition of plasmodium. Var-7 belongs to Ct laim 4; Page 56-61; 96pp; English.

CC This sequence represents the var-7 gene of Plasmodium. Var-7 belongs to CC the Duffy binding like (DBL) family of genes which have homology to the Duffy binding protein (DABP) and sialic acid binding protein (C (SABP) conserved regions (see T72889 and T72888 respectively). The var CC family of genes modulate cytoadherence and antigenic variation of CC plasmodium infected erythrocytes. SABP and the Duffy antigen binding CC protein (DABP) are soluble proteins that appear in the culture composition fiter infected erythrocytes release merozoites. DABP and SABP CC surface. These proteins are necessary for erythrocyte invasion by the compositions are for the treatment and prevention of the invention. CC The compositions are nucleotide sequence or encoded polypeptide of the CC compositions are used for the treatment and prevention of malaria, and CC compositions are used for the treatment and prevention of malaria. They care also used in the preparation of vaccines for inducing a protective immune response in a mammal to plasmodium merozoites (especially CC plasmodium falciparum or plasmodium merozoites (especially Sequence 19124 BP; 7824 A; 2190 C; 2790 G; 6320 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              17/2802;

Disclosure; p; English.

Sequence allows for production of antigenic malarial proteins, use diagnosis, prevention and treatment of the disease. The sequence mused in an expression vector, and signal and regulatory sequences used to stimulate production of other products.

                                                                                                                                                                                                                                                                                                                                                                           The 140 kD antigen of Plasmodium falciparum merozoites encoded by thi sequence can be used in malaria vaccines, and antibodies raised against it are useful in passive immuno-prophylaxis. The antibodies, nucleic acids and proteins are also useful as diagnostic agents, and antibodies may be used for the recovery of high-purity proteins. Sequence 3975 BP; 1690 A; 393 C; 575 G; 1317 T;

To construct pompA-5, pUC18-SERP which carries the complete SERP gene on a 5.8 kb XbaI fragment (Knapp et al., Mol. Biochem. Parasitol. 32 (1989), 73-84) was digested with KpnI and PstI. A 1.3 kb DNA fragment (see features) was isolated and ligated into the respective sites of pSK vectors. Subcloning of the SERP fragment into pSK was performed in order to create the correct translational reading frame at the 3' end of the SERP coding region. The resulting plasmid pSK-SERP was digested with SmaI and KpnI, the 1.3 kb fragment was isolated and cloned into the respective sites of pHS164-L.

pompA-5 and pompA-7 both encode 451 amino acids of the SERP antigen.

DNA coding protein GBP 130 h and proteins produced - used vaccines to control malaria Claim 1; Page 12-14; 17pp; German.
Glycophorin binding protein 130h is a P.falciparum blood santigen 69% homologous with the known GBP130. The GBP130h its homologues can be used in vaccines to protect against caused by P.falciparum. The coding sequence was isolated u

                    Histidine-rich protein associated with Plasmodium knob phenotype and DNA encoding it, used for in vitro diagnosis of P. Falciparum infection.

Claim 1; Fig 4A-D; 29pp; English.

Two variants of HisRP are produced by P. falciparum. One is associated with what is referred to as "knobby phenotype" (K30) and "knobless phenotype" (K-). The "knobby" and "knobless phenotypes have been implicated in cytoadherence, which is characteristic of a part through the product of the company of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     techniques on a genomic P.falciparum FCBR strain library. GBP130h gene was found to be highly conserved between diff strains but is distinct from the GBP130 gene. See Q27878-Q27885 and Q33432.

A polypeptide comprising a Plasmodium falciparum (Pf) erythrocyte membrane protein 1 (PfEMP1) or active fragments or analogues of that protein can be used in the treatment or prevention of symptoms of a malaria parasite infection. The polypeptides can inhibit, block or reverse the sequestration of erythrocytes in patients suffering from malaria. Nucleic acids derived from the PfEMP1 gene can be used as probes and primers to identify a Plasmodium falciparum parasite, the primers used to generate characteristic amplification patterns from different P. falciparum strains. Antibodies specifically immunoreactive with the PfEMP1 polypeptide or its fragments may be used in diagnosis of malaria infection. This sequence encodes the pfEMP1 protein of the MC type of Plasmodium falciparum. An alternative with the PfEMP2 polypeptide or its fragments may be used in diagnosis of malaria infection. This sequence encodes the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             26-APR-1996; U05798.

Disclosure; p; English.

Disclosure; p; English.

Sequence allows for production of antigenic malarial proteins, useful diagnosis, prevention and treatment of the disease. The sequence may bused in an expression vector, and signal and regulatory sequences may lused to stimulate production of other products.

The CDNA encodes a protein that includes 2 insert sequences not found in other CPSII proteins. The first separates the putative structural subdomain and the glutaminase subdomain of the glutamine-amidotransferase subunit of CPSII, while the second separates 2 ATP binding subdomains of the CPSII subunit, CPSB and CPSD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

Second strand was prepared using RNase H and DNA polymerase I. EcoR I adapters were ligated to the cDNA, and it was digested with Xho I. Prepared fragments were ligated into EcoR I + Xho I digested lambda ZAP II vector. "
